Guidelines for completing your MSc Thesis and finishing your studies in Neural Systems and Computation

Auflagen:

- If you have been assigned “Auflagen” courses with your acceptance, you must have completed these courses by the time indicated, and before registering for the oral MSC exam.
- “Auflagen” courses do not count towards the required 90 credit points for modules.
- “Auflagen” courses are treated like compulsory courses i.e. core modules. This means that you can fail such exams only once before being suspended from the program and you cannot replace these courses with other courses.

Core modules, Elective Core Modules, Elective Modules:

- You must have finished all your core modules, elective core modules, and elective modules before you can register for the oral exam. In total the credits for all modules have to sum up to at least 90 CP. Additional requirements for the credits points counted towards Elective Core Modules are listed on the NSC webpage http://www.nsc.uzh.ch.
- Journal Club: Make sure to register for the Journal Club at the start of the semester. Once a date for your presentation has been set it cannot be changed without approval by Richard Hahnloser (rich@ini.uzh.ch).
- At the end of semester 3, make sure that you have all your core and elective core modules booked.
- At the end of semester 3, meet with the MSc Coordinator and have your list of elective modules approved (including courses that you plan to take in semester 4). You do not have to do this if all your elective modules are on the list of suitable elective modules on the NSC website.
- If you have taken courses at other universities, you are responsible for having them registered with UZH before registering for the MSc oral exam.
- Be aware that all grades for modules (including failed courses) will show up on a Transcript of Records, which you can request any time from the Office of the Dean of Studies of the Mathematics and Natural Science faculty (MNF). In your final Academic Record, which you can only receive after finishing your MSc, only the courses you passed will show up.
- Registering for a course and not taking it will result in a bad grade on your Transcript of Records. Same is true for an exam for which you register but do not take. To avoid this from happening, unregister before the respective deadlines.
**Short projects and MSc Thesis:**

- Fill out the registration form of your project/thesis and have it signed by your supervisor(s) at the start of your thesis/project. One of the supervisors must be a professor and mentor listed on the NSC webpage. Hand in the signed form to the NSC administrative staff.
- The time allocated for a thesis (i.e. 6 or 9 months) is an **upper bound**, not a lower bound.
- Students are not required to work full time on their thesis, but need to attach a list of all courses they will attend while working on the thesis to their thesis registration form. Use the following formula to add days to your end date: 1 ECTS credit = 30 working hours.
- Hand in a paper copy of your report. You will also receive an email with instructions how to access a repository to upload all important data for your project/thesis to an INI server. You need to upload a PDF copy of the report, source code, data files, Latex or Word files, figures, and other files specified by your supervisor. Your supervisor needs to approve that the data handed in are sufficient by signing the paper copy.

**External MSc Thesis or Short Projects:**

- Plans for external theses or short projects are not encouraged and must be pre-approved by the MSc program’s director. You thus need to hand in a 1-2 pages proposal describing your external project. The program director has to approve this proposal by signing it. You also need a formal NSC-based supervisor who must be a professor listed on the NSC website.
- Hand in a paper copy of your report and upload all data as specified above for MSc theses. Your UZH/ETH supervisor needs to approve that the data handed in are sufficient by signing the paper copy of your report.
- The external supervisor must send an evaluation report to the NSC Professor. The final grade will be given by the NSC Professor.

**Oral exam:**

- Present your thesis in the INI lab meeting (Wednesdays from 16:00-17:00). Make sure that your responsible NSC Professor (and, if applicable, supervisors) are present at the oral exam. The oral exam must take place during the INI lab meetings and cannot be replaced by a presentation at another institute/place.
- Your talk time is 20 minutes, excluding 10 minutes for questions.
- You must have all your modules completed, and short projects and thesis handed in by your responsible NSC Professor before you can take the oral exam. The oral exam is the final exam of your MSc studies.
- The exam will be cancelled if any of these requirements are not met.
- Contact Benjamin Grewe (bgrewe@ini.ethz.ch) about open time slots at the lab meeting. It is your responsibility to inform NSC administration and your supervisor(s) about the date of your oral exam.
- Reserve a time slot at least one month in advance. You can see a list of time slots that are already reserved at [http://www.ini.uzh.ch/admin/modules/ini/ini_meetings.php?mtyp=570](http://www.ini.uzh.ch/admin/modules/ini/ini_meetings.php?mtyp=570).
Typically 2 presentations per day (MSc oral exam or PhD student presentations) are given, in rare cases 3 time slots can be reserved (but no more than 2 MSc oral exams). If all possible time slots for you are already assigned, you can try to contact PhD students with assigned time slots to switch their presentation date with you (it is your responsibility to arrange this with INI PhD students).

- A copy of your thesis has to be presented to your supervisor(s) at least one month before the oral exam. If your supervisor(s) do not receive your thesis in time, they can request to cancel or move the oral exam.

- The final corrected and signed paper copies of your thesis and all short project reports have to be handed in to the NSC administration at least one week before the oral exam.

- Your presentation will be recorded on video.

**End-of-studies Form:**

- You can request your degree after you have completed all exams and courses. You will not receive your degree automatically; you have to hand in the end-of-studies form with the UZH administration, together with a printout of the cover page of your thesis. The end-of-studies form can be obtained from the NSC website or directly from the study coordination officer of Mathematics, Physics and Neural Systems and Computation, Mrs. Simone von Burg Black, Office Y27 K06.
